**hello** I am...

(Noongar name) **Wowoo**  
(Common name) **Australian Hobby**  
(Scientific name) *Falco longipennis*

See if you can spot me next  
time you visit Jirdarup  
Bushland!

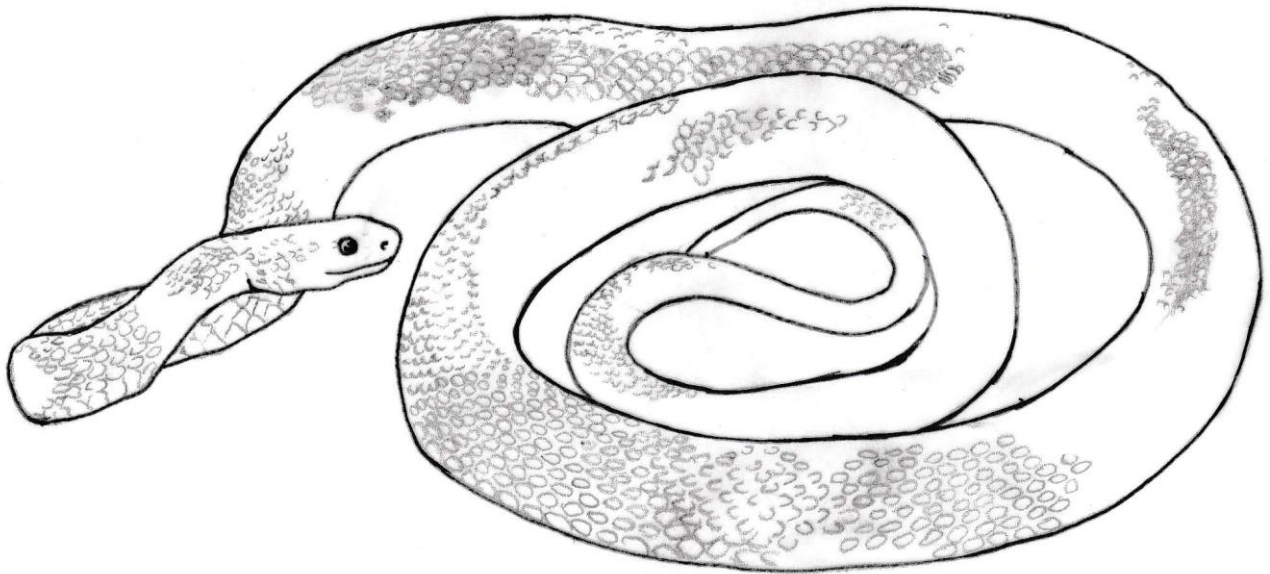

I live all over Australia as well as Tasmania in open woodlands, forests, wetlands and the suburbs.

I eat small birds and sometimes I'll snack on an insect or two.

I never build my own nest. I will find a nest that another bird has worked hard to make and just move on in!

**hello** I am...

(Noongar name) **Dobitij**

(Common name) **Dugite**

(Scientific name) *Pseudonaja affinis*

I make my home in scrublands, woodlands, forests, farms, grassy areas and sand dunes.

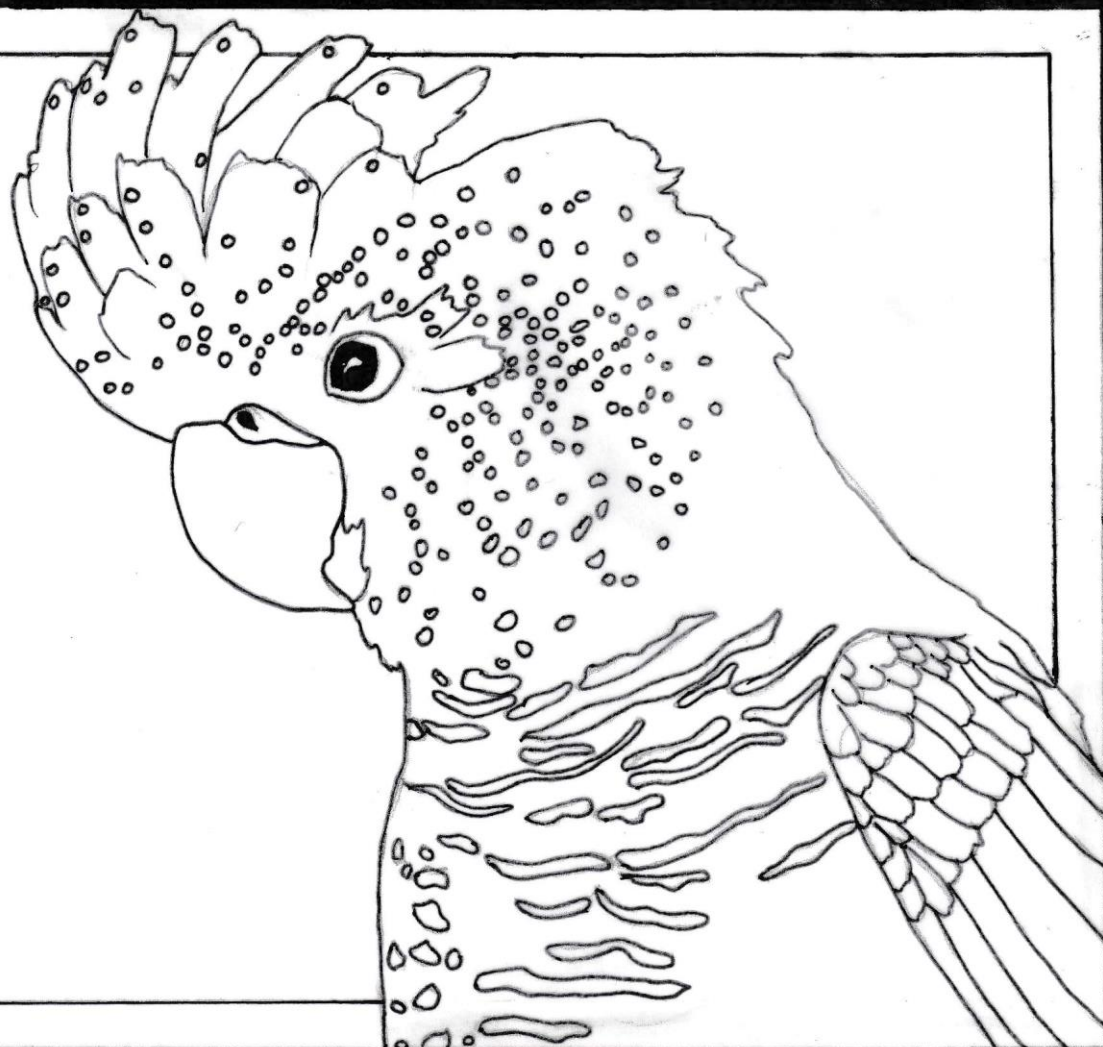

I like to eat all kinds of small animals including frogs, lizards, rats, mice and even other snakes!

I am scared of people. I may get frightened and try to bite you if you come close to me! This would be dangerous because I am **venomous**, and my bite can make people very unwell.

You may get to watch me from a distance next time you visit Jirdarup Bushland!

**hello** I am...

(Noongar name) **Karrak**

(Common name) **Forest Red-tailed Black-Cockatoo**

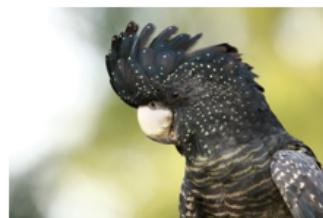

(Scientific name) *Calyptorhynchus banksii*

I particularly like to live in forests and woodlands where eucalyptus and casuarina trees grow.

Check out my big strong bill! I use it to crack open honkey nuts, banksia cones and casuarina pods to eat the seeds inside.

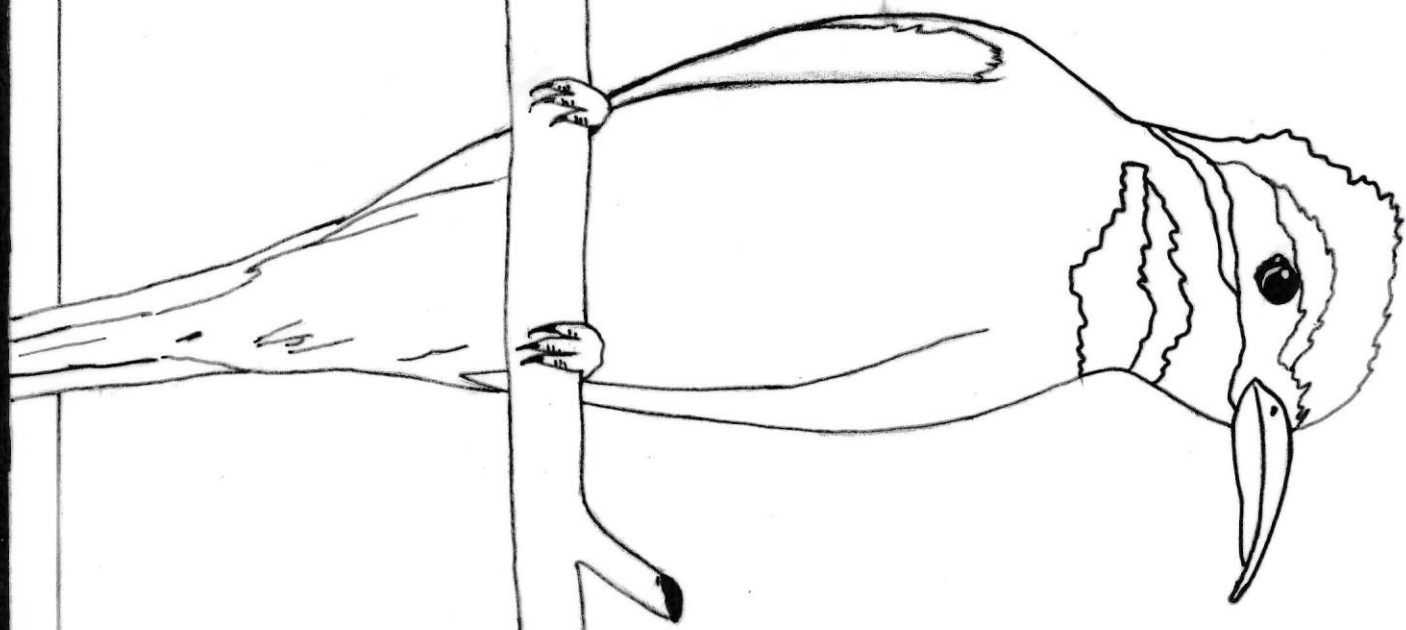

I need a hollow cavity in a tree to lay my eggs. These can be hard to find so sometimes, people put wooden boxes in trees for me to lay my eggs in. Can you see any around?

See if you can spot me next time you visit Jirdarup Bushland!

hello I am...

(Noongar name) **Birrangga**

(Common name) **Rainbow Bee-eater**

(Scientific name) *Merops ornata*

I live all over Australia, except for the desert.

I think that insects are so yummy! I especially love to eat flying insects like bees, wasps, butterflies, dragonflies and beetles.

I lay my eggs inside tunnels that I dig in mounds of sand.

See if you can spot me next time you visit Jirdarup Bushland!

**hello** I am...

(Noongar name) **Koorla**  
(Common name) **Granny Bonnets**  
(Scientific name) *Isotropis cuneifolia*

I grow around the South-West coast of Australia.

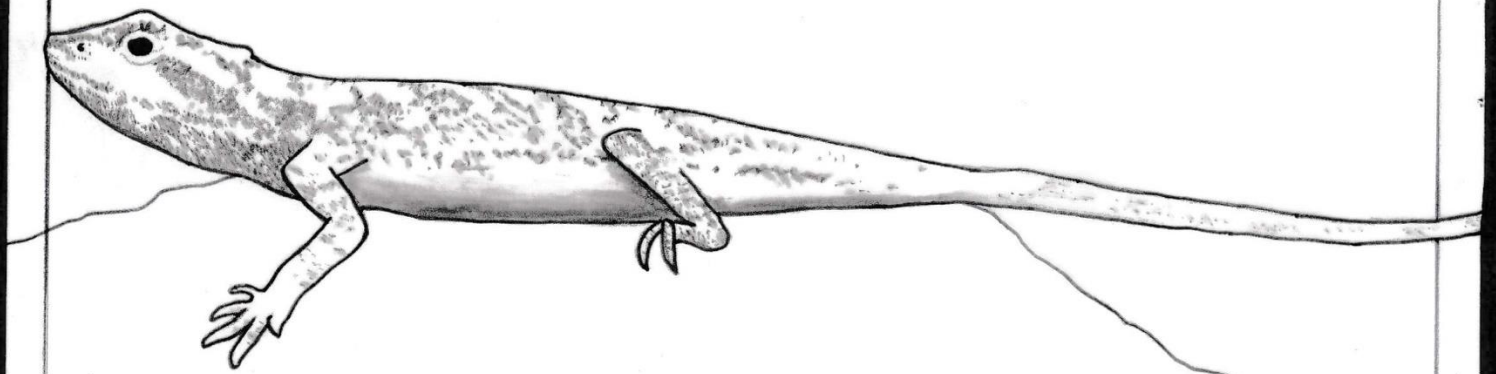

After a bushfire, ill pop up all over the place but most of the time you'll find me scattered here and there around the bushland.

I am poisonous, I don't want anything to eat me!

See if you can spot me next time you visit Jirdarup Bushland!

**hello** I am...

(Noongar name) **Badart**  
(Common name) **Dwarf Bearded Dragon**  
(Scientific name) *Pogona Minor*

See if you can spot me next  
time you visit Jirdarup  
Bushland!

I live all over Australia including woodlands, forests  
and deserts.

I like to eat insects, leaves, fruits and seeds.

I lay my eggs somewhere safe in the dirt or leaves.  
When my eggs hatch, the babies can take care of  
themselves.
